The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1,148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1,2 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ferenzi 4776650 in view of Hayes 4121720. Ferenzi teaches a display 10 for articles such as perfumes or cosmetics and also having a mirror and a light. Hayes '720 teaches a means for suspending a display. To provide Ferenzi with a suspension means as taught

by Hayes as an alternate supporting means would have been obvious for one having ordinary skill in the art at the time of the invention.

Applicant has amended claim 1 to recite

"and a[n] said upper end including a pivot structure, designed so as to be pivotally mounted "

Applicant has further amended claim 1 to recite

"a vertical panel to which the mirror is attached, the vertical panel extending downward via a support panel to which the display element is attached, the support panel being tilted downward relative to the vertical panel at an angle of between 90° and 135°
"

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Applicant's arguments do not comply with 37 CFR 1.111(c) because they do not clearly point out the patentable novelty which he or she thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. Further, they do not show how the amendments avoid such references or objections.

The pivot structure is seen to be the element 20, the chain connecting to element 20 and the hook connected to the bracket of Hayes as shown in Figure 1. The vertical panel to which the mirror is attached is the back of the cabinet. It can also be noted that a support panel at 90 degrees to the vertical panel is the bottom ledge of the cabinet. The limitation "between 90 degrees and 135 degrees is not seen to provide any advantage, unexpected or unanticipated result and is seen to be a matter of choice in design.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
